

MEETING AGENDA

Date: May 12th, 2026

Time: 3:00 PM

Location: Paonia Town Hall, 214 Grand Ave
Paonia, CO

Subject: Raw Water Monitoring Improvements Pre-Bid Meeting

1. Introductions

- a. Town of Paonia:
 - i. Jordan Redden – Lead Utility Operator
 - ii. Stefen Wynn – Town Administrator
- b. RESPEC
 - i. Douglas Schwenke, PE – Engineer of Record
 - ii. James Starnes, PE

2. Bidding Requirements

- a. Mandatory Pre-Bid Meeting Attendance, must sign-in
- b. 5% Bid-Bond
- c. Performance Bond and Labor and Materials Payment Bond at Contract Price
- d. Acknowledgement of addenda
- e. 2-Year Warranty Period (as described in Supplemental Conditions)
- f. State Revolving Fund (SRF) Requirements (Appendix B of the Construction Specifications)
 - i. Davis-Bacon Prevailing Wages
 - Monthly interviews will be conducted
 - Review County Requirements, Lakefork Site is located in Gunnison County, while other project locations are in Delta County
 - ii. American Iron and Steel
 - iii. National Term on Suspension and Debarment
- g. Bid Opening

5540 TECH CENTER DRIVE
SUITE 100
COLORADO SPRINGS, CO 80919
719.227.0072

- i. Wednesday June 3rd @12:01 PM, 2026
- ii. Paonia Town Hall
214 Grand Ave
Paonia, CO 81428
- iii. Bids are currently slated to be submitted in person. However, if bidders would like the option to email, that can be arranged and coordinated in a subsequent addendum.

3. Project Information

- a. Project is being jointly funded through Colorado Department of Public Health and Environment (CDPHE) Drinking Water Revolving Fund (DWRf) Loan and Colorado Department of Local Affairs (DOLA) Energy Impact and Assistance Fund (EIAF) grant
- b. Project is intended to assist the District to monitor raw water intake locations to better identify source water capabilities.
- c. Project includes four monitoring location sites where equipment and telemetry is to be installed. Monitoring equipment layout differs from site to site.
- d. Locations depicted in drawings are estimated. All existing raw water lines and structures are to be field verified for location, alignment, and pipe sizing.
- e. By-pass water lines are to be installed to minimize downtown time of source water.
- f. Sites are remote and access may be limited.
- g. Easements, site access, and staging
 - Staging: recommend using the Lamborn Tank site, so long as the tank site is locked and all gates are closed.
 - 80/20 site: access not far from Tank site. No special access permits necessary
 - WTP Blowoff site: just upstream from Lamborn WTP. No special access permits required.
 - Lakefork: access is difficult. Either from Lone Cabin or up from STP. Most likely no trailers. Lone Cabin is recommended, but is challenging. Gate access through Lone Cabin is from May 1 to mid-November. Paonia needs to update the USFS access permit to the site.
 - Old Original / Reynolds – current access road that goes by Old Original. Road is fairly well established,. Paonia needs to confirm access with Steve Roeber.
- h. Pre-bid meeting is mandatory. Bidders who do not attend this pre-bd meeting are not allowed to submit bids for this project.
- i. See Instructions to bidders Section of specifications for required information to be submitted by apparent low bidder. A bid bond is required as part of this bid package.
- j. Mountain Peaks is the current SCADA integrator for the District. They have been identified as the sole source integrator for this project. Each prospective bidder shall engage with Mountain Peaks to provide the SCADA components as outlined

in Division 17 of the Project Manual. Brain Mitchem is the contact for Mountain peaks and his phone number is (303) 885-5967.

- k. Important suppliers have also been identified in the project drawings and project manual. The contractor may wish to look for “as approved equals” to the following equipment and materials suppliers. However, it is recommended that the prospective bidders engage with the following equipment suppliers:
 - i. Combination Meters – Badger Meter
 - ii. In Pipe Weir – Thel – Mar

4. Permitting Requirements

- a. Application for Construction Approval Basis of Design Report – has already been acquired through CDPHE.

5. Construction Observation and Testing – to be provided by the Town of Paonia.

6. Contractor protocols

- a. Will need to follow OSHA and SRF protocols as outlined in the Contract Documents.
- b. Contractor required to hire be responsible for appropriate sub-contractors.

7. Resident Communication

- a. Any disruption to service will be communicated to the Town of Paonia representative and given at least twenty four (24) hours notice of any planned water outages.

8. Addendum #1 – is attached to this agenda and will be released via Quest CDN.

9. Contractor Question

Meeting Minutes

The Raw Water Monitoring Project is the second of two major projects, both of which are partially funded through a Colorado Department of Local Affairs Energy Impact and Assistance Fund grant.

Drinking Water Revolving Fund for the Raw Water Monitoring Improvements feature the same similar requirements, such as Davis-Bacon Requirements and Buy America / Build America requirements.

Derek Heiniger with the Town of Paonia will provide assistance, though Jorden Redden will serve as the main point of contact

Stefen Wynn – Town Administration

Doug Schwenke, who administered the meeting, continues to serve as the Principal in Responsible Charge. However, BJ Elkins will serve as the engineer’s main point of contact.

Pre-bid meeting: GCs need to be present, subs do not

5% bid bond required

See Instructions to Bidders section of the Technical Specifications for bid submittal requirements

All bidders must sign in on the sign-in sheet in the back. A copy of the sign-in sheet will be provided in addendum #1

Addendums need to be acknowledged in bid form, with a signed copy of each respective addendum included in the bid submittal.

Project is being funded through a Drinking Water Revolving Fund loan and DOLA EIAF grant

Davis Bacon. Prevailing Wages (Delta County and Gunnison County)

Certified Payrolls

AIS, BABA (a waiver for up to 5% of the contract cost can be applied for)

Bid Opening – currently scheduled for June 3rd (Different Date than waterline). Currently, all bids need to be submitted in person, though instructions to submit bid via email will be sent out in a subsequent addendum.

The raw water monitoring project and 8" waterline replacement project represent two different projects. The town does not intend to award both projects to the same bidder, unless that same bidder is the low responsive bidder for both.

Intent of the project: to improve spring flow monitoring capabilities at distinct locations within the current spring monitoring system.

Site Access: Will be difficult, especially to sites M2 and M3.

- Staging location – Upper Lamborn Tank. Contractors may use this site for staging, but will be responsible for locking site access gate, and making sure all fencing is closed to keep cattle from escaping.

M1: 80/20 splitter box, existing site. Currently takes flow from three different springs. Work includes provision of elastomeric V-Notch weirs to continuously monitor and record all flow from 80/20 splitter box overflow. Also includes provision of combo meter vault with associated telemetry to provide real time flow measurement coming into the splitter box. Access fairly easy and through the Roeber Refuge from the Upper Lamborn tank site. No permitting should be required, though the Town of Paonia will confirm with the forest service and the Roebbers.

M2: Lake Fork Spring Site. Very challenging to access. There are actually two ways to access, one from treatment facility, which is longer and features very difficult terrain. The other via Lone Cabin, which is steep and thin, but will less boulders. The town and the engineer are not dictating access to the contractor, but the Town would recommend using the Lone Cabin reservoir access. Jordan – Some brushing clearing. No cell access. Limited to no trailer access for either route. The US Forest Service will need to inspect the construction equipment before it enter the access to the Lakefork site.

Access limited. May 1st to middle of November. A new service access with UFS needs to be submitted. Hauling to include manhole.

M3: Reynolds – a bit more accessible via access road from above. Tracking equipment likely required to haul materials rather than via trailer. Access via Roebbers Refuge. Manhole pit with combo meter with associated telemetry. The proposed location of this equipment may need to be relocated closer to the Upper Lamborn / Clock Plant split, but that will be decided during construction. For now, all bidders will assume that monitoring point M3 will occur at the location shown on the drawings.

M4: Access via Lamborn fairly easy though road may limit means, but not far from Lamborn. Work only includes insertion of elastomeric volumetric V-Notch weir and associated telemetry.

Each site includes data loggers, and solo and Mountain Peaks is sole source integrator and was in attendance for today's meeting.

Permitting – CDPHE has already approved the raw water project through the BDR process. The Town of Paonia will reach out to the US Forest Service and contact them regarding new access amendment to Lakefork. The Town will also reach out to the Roebbers regarding access through the Refuge, though this may ultimately require contacts through the Forest Service. Dewatering and obtaining dewatering permits through CDPHE is ultimately the responsibility of the contractor, especially when installing manholes. Some geotechnical testing required by contractor. To be paid by ToP.

Onsite Davis-Bacon Interviews required per the DWRF loan.

Addendums will be distributed through Bidnet.

Questions can either be sent from contractors to the Engineer via email or through BidNet (BidNet is preferred). Questions may be asked today, but not official without written submittal.

Questions

- UFS Service access inspection requirements: The US Forest Service will more than likely need to inspect all construction equipment before it enters Forest Service property. That access and inspection point will be dependent upon where the contractor can access Lakefork as described above. The Town of Paonia will reach out to the US Forest Service to discuss access to Lakefork and the pending amendment.
- Site access prior to bid: contractors may contact Jordan Redding with the Town of Paonia regarding inspecting the different sites prior to bidding. Contractors may coordinate a time to visit sites M1, M3, and M4 with Jordan. However, the Town of Paonia cannot facilitate a site visit and inspection of site M2 (Lakefork). The Town and Engineer believes that there is drone footage of the Lakefork site that can be made available to contractors via addendum once it is located.
